

EXPLORING FOR MAJOR COPPER AND GOLD MINES.

Strategic | Disciplined | Responsible | Committed

Corporate Presentation | August 2026

TSX: **COPR** OTCQB: **CPPMF** FSE: **9I3**

Cautionary Notes

This document has been prepared by Coppernico Metals Inc. (“Coppernico” or the “Company”) to showcase the Company’s mineral exploration projects. Because it is a high-level summary presentation, the information contained herein cannot contain all the information that should be reviewed before making an investment decision.

SUMMARY OF CAUTIONARY NOTES:

- Forward-looking statements are inherently uncertain;
- Canadian mineral disclosure differs from US mineral disclosure;
- See full disclosure records for Coppernico at www.sedarplus.ca – some information may be found under the Company’s former name, Sombrero Resources Inc., or the predecessor company, Auryn Resources Inc. (now Fury Gold Mines Limited).

The scientific and technical information contained in this presentation was reviewed and approved by Tim Kingsley, M.Sc., CPG, Coppernico’s VP of Exploration, who is a “Qualified Person” (as defined in NI 43-101).

Creating & Monetizing a Tier-One Exploration Portfolio

- Our flagship asset, Sombrero, offers the opportunity to **extend a world-class copper-gold skarn and porphyry mining belt** through new discoveries.
- We believe Sombrero is a **direct analogue to Las Bambas, the 11th largest copper producing mine** in the world¹ and other major nearby mines
- Prioritizing safety, local communities and the environment at all times.

Major Copper Discoveries | 1990-2023

Source: S&P Global <https://www.spglobal.com/market-intelligence/en/news-insights/research/2025/12/new-major-copper-discoveries-remain-scarce-late-stage-assets-drive-growth>

Copper Demand is Structural, Not Cyclical

DRIVEN BY MULTI-DECADE GLOBAL TRENDS:

- Population growth + rising living standards
- Urbanization and infrastructure buildout
- Electrification and digitalization

Each cycle increases copper intensity per capita

THE ENERGY TRANSITION ADDS A NEW DEMAND LAYER:

- EVs
- Renewables
- Grid expansion
- Energy storage

Track Record of Monetization through Discovery

Consistently building companies that generate meaningful shareholder value through **discovery, advancement and strategic monetization.**

Seasoned Management with Global Discovery Expertise

MANAGEMENT

Ivan Bebek
Co-Founder, Chair & CEO

- **>25 years' experience** in financing exploration, foreign negotiations and M&A
- Formerly President, CEO & Co-founder at Cayden Resources (sold to Agnico Eagle for C\$205M) Former Exec Chair of Auryn Resources & Co-founder Keegan Resources

Christian Rios M.Sc., P.Geo.
SVP, Corporate Development

- **>24 years' experience** in exploration, development, operations and communities
- Directly involved in the discovery of the Santa Ana and Corani deposits at Bear Creek

Stacy Rowa CPA, CA
CFO

- **>19 years' experience** in accounting, auditing and corporate finance
- Was CFO at Auryn Resources (predecessor company)

Tim Kingsley MSc, CP.Geo
VP, Exploration

- **>20 years' experience** in precious and base metal exploration and project development
- Track record in brownfield exploration and increasing mineral resources at Trevali Mining

DIRECTORS*

Ivan Bebek Co-Founder, Chair & CEO >25 years
Financing Exploration, Foreign Negotiations and M&A

Antonio Arribas PhD >38 years
Mineral Exploration Experience Across Multiple
Companies and Regions

MJ McQuhae MBA >26 years
Business Transformations, Operational Improvements

Marie-Hélène Turgeon M.Env., ICD.D, P.Geo >23 years
ESG, Environmental Management, Legal Compliance
and Stakeholder Engagement

Jeffrey Mason CPA, CA, ICD.D >36 years
Extensive experience in Corporate Finance in precious and base
metals projects in the Americas, Asia and Africa

Gordon J. Fretwell LLB >33 years
Corporate And Securities Law

*All directors are independent aside from Ivan Bebek who is non-independent

Key Milestones and Near-Term Catalysts

2024

- ✓ Secured **C\$19 million in financing**, including a 9.9% *strategic investment by Teck*
- ✓ Successfully **listed Coppermico on the TSX** under symbol “**COPR**”
- ✓ Commenced **inaugural drill program**

2025

- ✓ Exploration program **confirmed significant skarn system**
- ✓ **Expanded target pipeline** and **optimized land position**
- ✓ **Filed expanded drill permit application** to increase drill holes, drill pads, and permitted areas to support a multi-year, scalable drilling program

2026

- ✓ **Reported strong channel sampling results at Nioc**, defining **155 m averaging 0.54% Cu**, advancing Nioc as a high-priority target

Next Steps

- **Advancing expanded drill permits** toward approval
- **Advancing the Sombrero Project pipeline toward drill-ready targets** through surface exploration, geophysics, geochemistry and drill planning
- **Strengthening community partnerships** through ongoing engagement and additional agreements
- **Evaluating high-quality assets** in complementary jurisdictions to enhance portfolio optionality

Exploring the Extension of a Prolific Copper Mining Belt

Target rich

Multiple scalable high-quality discovery opportunities

Numerous underexplored targets

Direct analogues to nearby major mines

Based on scale, rock type, mineralization style & age of rocks

Exceptional Access to Infrastructure

Paved Roads

Hi-Tension Power Lines

2 Nearby Towns

Moderate Terrain - 3,900m Elevation

Collaborating with the Communities & Government For over 9 Years

Peruvian
community team
has **extensive
background and
experience in
collaborating with
local communities**
in the central
southern Peru

Building partnerships with local communities

One technical
specialist in
animal health

Two Quechua
speakers and an
agricultural engineer

Social field leader, Jose
Pino, is a specialist in
Agroideas Business Plan

Sustainable Benefits

Coppernico is sponsoring applications for additional government-funded agriculture programs

Geophysical Surveys | 10 km Trend of Anomalies

Refined geology improves drill targeting; magnetics, gravity, and chargeability define priority zones.

3D inversions of gravity, magnetic, and chargeability (IP) datasets filtered to highlight anomalous values (gravity $>2.71 \text{ g/cm}^3$, magnetics $>0.1 \text{ SI}$, and chargeability $>20 \text{ mV/V}$).

Historical Drill Core Supports Robust Model

Subsurface Mineralization Correlates with Geophysics

At 33 m: 1.32% Cu and 0.03 g/t Au in hematite vein stockworks with malachite staining at their margins

At 62 m: 1.35% Cu and 0.54 g/t Au massive magnetite with disseminated pyrite in sulphide zone

Shallow historical drilling¹ along a portion of the geophysical anomalies demonstrates **high-grade mineralization from surface** that continues to depth and provides direct validation of the 10 km geophysical signature:

Hole ID	Interval ² (m)	% Cu	g/t Au

FE-DDH-03A	116	0.42	0.24
Including	64	0.64	0.38
FE-DDH-03B	50.8	0.44	0.15
True thickness of mineralization is unknown			

- 2013 drilling completed by Aceros only assayed for iron, resampled by Auryn in 2019 (See Auryn news release dated June 13, 2019)
- No less than 5m of $\geq 0.1\%$ Cu, maximum dilution 6 m (See technical disclosure in Auryn news release dated June 13, 2019)

Brownfield Discovery Expansion Potential

Brownfield skarn target, defined by a ~700 m long gravity feature located along the margin of a much larger dense body, indicative of a Cu-Au mineralized magnetite skarn developed along an intrusive-carbonate contact.

1. Length and density weighted assay composites. True thickness is unknown; the highlighted channels are oriented generally perpendicular to rock outcrop and are considered most representative at time of reporting. No more than 6 consecutive meters of internal dilution (defined as reported values below 0.2% Cu). Minimum reporting length of 6 m. Channels 067 and 069 did not return significant copper mineralization.
2. Channel 072, the 126 m interval, includes 8 m of unsampled material which was given a 0% Cu value in the composite

Niococ Channel Samples

Nioc | Channel Sampling Open for Expansion

Nioc Target Area | Recent Channel Samples

- Large, vertically continuous +20mV/v chargeability anomalies
- Significant copper mineralization present on surface

COPPERNICO METALS / 22

Tipicancha | Lithocap-Porphyry System

Clear vectoring toward a porphyry source

- Strong horizontal + vertical zonation
- Increasing temperature at depth

Structures focus mineralization

- ENE-WSW corridors, and
- NNE-SSW intersections = key fluid pathways

400-m Vertical Window of Potential Mineralization

Good Lucky Target 7km NE of Ccascabamba Target

Expanding on Key Targets

The principal targets at Sombrero are copper-gold skarn, porphyry systems and precious metal epithermal systems.

Building on insights from Phase 1 drilling, **Antapampa** and **Tipicancha** have been identified as new targets for further exploration.

Milpoc and **Macha Machay** have recently been incorporated into the regional exploration pipeline based on encouraging surface geochemical and alteration signatures.

Rumi was recently staked to expand the project footprint to the southeast.

Expanding Drill Permits

HUANCASANCOS:

- **Environmental permit (DIA)¹ in place** – allows for up to 49 holes from 38 drill pads at Ccascabamba target area
- **Semi-detailed EIA (EIA-Sd) filed** to significantly expand the permitted drill footprint beyond Ccascabamba
 - Proposed permit area expanded to ~3,024 ha, from 904 ha currently permitted
 - Drill platforms to increase from 38 to 181 pads, allowing for multi-rig drilling upon approval
- Continuously working on additional community partnerships in the region

1. Declaración de Impacto Ambiental

2026 Multi-target Drill Program

Testing Independent Discovery Vectors

TWO PARALLEL OBJECTIVES

1. Expand Known Mineralization

- Expand and define Fierrazo mineralization
- Initial test of mineralized Nioc systems

2. Discovery + System Definition

- Focused drill targeting over Chumpi
- Vector within Hojota and Corrales zones
- Initial evaluation of Huachana target
- Initial evaluation of Tipicancha system

✓ SCALE
✓ GRADE
✓ STRONG VECTORS

Planned 2026 Timeline

Multiple Drill Targets, Near-Term News Flow

- **Drill-ready:** Geophysics interpretation and advanced targeting completed
- **Systematic exploration:** Initiate drilling at Fierrazo, Ccascabamba, and Tipicancha; Nioc and Antapampa to follow
- **Permitting in parallel:** EIA-SD and PPM approvals expected to unlock additional drilling stages

DRILLING NEWS FLOW

Sombrero Property | Ownership

Sombrero property covers approx. 57,000 hectares¹ which has been acquired through a combination of staking and option agreements

Ownership	Claims	Hectares
Direct*	71	54,500
Aceros Option	3	600
Molleacruz Option	4	1,300
Horizonte Option	2	600

* Sombrero Minerales S.A.C is Coppernico's wholly owned subsidiary in Peru through which the Company directly owns its concessions

1. The total concession area is reported as 57,000 Ha; however, it is noted that there are overlaps within the concessions. Following the removal of these overlaps, the effective area is ~53,300 Ha.

Aceros Option | Terms

Due Dates	Work Expenditures (US\$)	Work Expenditure Status
December 13, 2026	\$150,000	Partially complete
December 13, 2027	\$500,000	Outstanding
December 13, 2028	\$1,000,000	Outstanding
December 13, 2029	\$2,162,544	Outstanding
Total	\$3,812,544	

- Upon exercise of the Aceros Option, a joint venture will be formed in which Coppernico will hold an 80% interest and Aceros will hold a 20% interest.
- In 2025, amendments to the Aceros Option incorporated the Fierrazo concession, extended the timeline to complete remaining work expenditures to December 13, 2029, and transferred responsibility to Coppernico for any required future rehabilitation of historical and future environmental disturbances.
- As of July 31, 2025, cumulative cash payments and work expenditures totaling US\$1.34 million have been completed under the Aceros Option.
- In addition to the work expenditures above, an annual holding payment of US\$118,000 remains payable under the Aceros Option, inclusive of 18% IGV, and was paid in January 2024 and January 2025. The Company does not currently consider the IGV portion recoverable.

Mollecruz Option | Payments

Due Dates	Property Payments (US\$)	Property Payment Status	Work Expenditures (US\$)	Work Expenditure Status
June 22, 2018	\$50,000	Completed	-	-
Subject to access	\$50,000	Completed	\$150,000	Deferred
Subject to access	\$100,000	Deferred	\$150,000	Deferred
Subject to access	\$200,000	Deferred	\$500,000	Deferred
Subject to access	\$300,000	Deferred	\$700,000	Deferred
Subject to access	\$900,000	Deferred	\$1,500,000	Deferred
Total	\$1,600,000		\$3,000,000	

- The Company may acquire a 100% interest, subject to a 0.5% net smelter royalty fee, through a combination of work expenditures and cash payments
- On May 20, 2019, the Company formally declared the existence of a force majeure event thereby deferring the Company's obligation to make the June 2019 property payments and any subsequent property payments and work expenditures for a maximum of 24 months from the declaration date
- On March 1, 2021, the Company agreed with the owner to extend the force majeure declaration for another 24 months and paid US\$50,000 as consideration for the June 2019 property payment. As a result, the Company was able to continue deferment of the remaining property payments and work expenditures until May 20, 2023
- On May 15, 2023, the Company amended its option agreement and extended the recognition of the force majeure status until such time an agreement or agreements are in place that allow the Company to access the concessions in order to carry out exploration work
- A payment of US\$5,000 was confirmed and paid at the time of amendment and will be paid annually under the option agreement until access to the concessions is achieved by the Company
- In February 2025, an updated Mollecruz Option was signed with no material changes to the terms with the purpose of filing a current dated document with the Peruvian public registry. The Company continues to work with the local community to achieve access in this area.

Horizonte Option | Payments

Due Dates	Property Payments (US\$)	Property Payment Status	Work Expenditures (US\$)	Work Expenditure Status
Date of Execution	\$37,500	Pending	-	-
Year 1	\$37,500	Pending	\$150,000	Pending
Year 2	\$112,500	Pending	\$150,000	Pending
Year 3	\$187,500	Pending	\$500,000	Pending
Year 4	\$512,500	Pending	\$700,000	Pending
Year 5 / Exercise	\$1,112,500	Pending	\$1,500,000	Pending
Total	\$2,000,000		\$3,000,000	

- Sombrero Minerales S.A.C. may acquire 100% interest in Palmaderas 2 22 & Palmaderas 3 22 (~600 ha) by completing the above work expenditures and cash payments over five years.
- Upon exercise, the Optionor retains a 1% NSR royalty, reducible to 0.5% within 10 years via a one-time payment of US\$1,000,000.
- Immediate exploration rights granted, including geophysical surveys and drilling, throughout the option period.
- Concessions are in good standing with no known encumbrances or environmental liabilities.

Schematic Sections | Ccascabamba Target Area

Looking Northeast **Skarn target, mineralization across multiple stratigraphic horizons**

Looking Northwest

Skarn target, mineralization across multiple stratigraphic horizons

Sombrero | Cluster Geology & Stratigraphy

- Significant metal endowment
- Large geochemical footprint (~18 km x 6 km)
- Multiple prospective skarn horizons

Sombrero Cluster | Combined Soils and Rocks

Large Highly Prospective Land Position

Drill-ready. Project Land Position = approx. 57,000 hectares

Ccascabamba Target Area | Major Skarn System Identified

- 20 diamond drill holes for a total of ~8,200 metres have been completed exploring the Corrales, Hojota, Chumpi and Escondida target areas.
- Primary targets were limited by drill permitted polygon**

Geophysical Surveys | Overlapping Anomalies

- IP and magnetic surveys reveal a 10 km trend of targets between Nioc and Ccascabamba.
- Targets are nearly 100% covered. Geophysical data is indicating a mixed sulphide-magnetite skarn target.

- Elongated NE-trending magnetic anomaly overlapping and on the margin of a very large gravity anomaly with similar orientation. Intermixed zones of elevated chargeability.
- Likely a large, strongly skarn altered and potentially mineralized (magnetite +/- sulphides) contact zone consistent with mixed sulphide-magnetite skarn.

Hole 24SOM-004 Cross-section

Hole 4 drilled underneath channel sample 18SRT-09 which intersected 105 m @ 0.23% Cu and 0.13 g/t Au¹. The hole drilled to a depth of 586.8 m reaching an area of elevated chargeability (+20 mV).

Cross-section of Holes 4, 13, 14, and 15

Exploring for extension of mineralization from hole 4

Drill Core from Hole 24SOM-004

The drill core exhibits significant skarn alteration over long intervals, as well as zones of strong hematite (iron) replacement of original rock

~70m intercept of Fe skarn (hematite/magnetite) replacement of limestone

"The Ccascabamba Area represents a large, very active mineralized system, and the extent of skarn alteration and the presence of sulphide minerals in hole 4 support our exploration thesis. This, combined with the complexity of the vein systems, indicate that we are in a highly prospective zone."

- Tim Kingsley, VP of Exploration

Drill Core from Hole 24SOM-004

Hole 4 displays zones with high concentrations of sulphide minerals including pyrite, chalcopyrite and pyrrhotite. Several intervals show a complex network of overprinting vein generations more than one of which contains chalcopyrite.

Diorite with secondary biotite alteration overprinted with several vein generations:

1. Garnet veins
2. Magnetite with epidote and chlorite veins, with a second event of pyrite deposited along magnetite borders with an associated sericite alteration halo.
3. Anhydrite + sulphides (pyrite - chalcopyrite - pyrrhotite - sphalerite) veinlets with sericite and chlorite alteration halo.
4. Late calcite and silica veins.

Drill Core from Hole 24SOM-004

- Garnet exoskarn overprinted chlorite +/- pyrite retrograde event.
- Cut by anhydrite + sulphides (pyrite - chalcopyrite - pyrrhotite - sphalerite) veinlets.
- Sulphides also present as disseminations.

These geological characteristics suggest a robust and multiphase mineralized system and further strengthen the potential for significant copper-gold skarn mineralization at this target.

Nioc | Channel Sampling Open for Expansion

Channel 25SRT-072, the 126 m interval, includes 8 m of unsampled material which was given a 0% Cu value in the composite, no samples collected between 118-126m

Sombrero Project | Timeline

2001	Aceros Arequipa, Peru's largest steel maker, conducted bulk sample testing at Fierrazo.
2007 – 2008	Alturas Minerals completed localized mapping, sampling and geophysics.
2013	Aceros Arequipa completed 8 drill holes totaling 988 m at Fierrazo, targeting iron mineralization.
2015 – 2016	Auryn geologists identified the continuation of the Andahuaylas-Yauri belt beneath volcanic cover at Sombrero; skarn and porphyry mineralization in erosional windows validated the district-scale exploration thesis.
2016	Auryn acquired the Ccascabamba claims and carried out prospecting, claim expansion and stream sediment sampling.
2018 – 2020	Auryn carried out mapping, geochemistry, geophysics, age dating and target generation. Option of Fierrazo concessions.
2023	Coppernico received Social Access Agreement, enabling drill permitting.
2024-2025	Fully permitted for drilling; secured \$19.37 mm in financing, supporting ~8,200 m of Phase 1 drill program and 18 months of working capital.
2026 onwards	Coppernico to define, rank and test priority targets across its land position in the potential western extension of the Andahuaylas-Yauri belt.

Initial Drill Targets Analogous to Las Bambas Mine

WORLD'S TOP 15 LARGEST COPPER MINES^{1,2}

Ferrobamba (Las Bambas) Map with Pre-2022 Drill Results

- High-grade (+1% Cu) skarn mineralization around polyphase intrusion system
- Complex – irregular geometry

Source: Report of Exploration Results from Las Bambas and Rosebery, by MMG Limited, dated July 13, 2023

Plan view showing Geology slice through 3,400m RL. The coloured traces show all intercepts > 0.2% Cu and > 8m length below the planned Reserve Pit from all holes drilled before 2022. Select intervals are highlighted in the text boxes.

Ferrobamba (Las Bambas) Cross-section XS-2 with 2022 Drill Results

- High-grade (+1% Cu) skarn mineralization around polyphase intrusion system
- Significant vertical extent

XS-2 (see slide 36 for location), showing the SW and N zone targets, and select intercepts. $\pm 50\text{m}$ window.
